EDUCATION

University of Waterloo

Bachelor of Computer Science - 3.92 GPA

Relevant Coursework: Operating Systems, Applied Cryptography, Data Structures & Algorithms

SKILLS

JavaScript, Go, Rust, C++, C, Python, Scala, HTML/CSS, Shell, Haskell Languages Git, Docker, Kubernetes, AWS EC2/S3, gRPC/Protobuf, React, SQL, MongoDB **Technologies**

EXPERIENCE

data.world

Software Engineering Intern

Carta

Software Engineering Intern, Infrastructure

- Designed distributed gRPC logging system using Apache Fluent for scalable auditing and compliance across organization.
- Created proof-of-concept for logging system using Kubernetes DaemonSets, with ConfigMaps to deploy custom configurations.
- Enforced standardization of Protobuf definitions for over 300 microservices by designing static analysis tool in Go.
- Optimized build times by 10x for Docker images by simplifying package requirements to allow precompiled dependencies.
- Improved system availability by identifying and removing bottlenecks in Redis server connections in Python library.

Tailscale

Software Engineering Intern

- Introduced cloud/serverless support by emulating TCP/IP stack in userspace for Docker containers, using Google gVisor.
- Enabled standardized communication using SOCKS5 protocol over Tailscale VPN by implementing proxy server in Go.
- Simplified deployments in cloud environments by creating single-session authentication keys with auto-cleanup.
- Developed a GitHub Action I for end-users that allows plug-and-play security for CI/CD pipelines.
- Expanded outreach within the technical community by writing long-form content for corporate blog C.

University of Waterloo

Research Associate

- Optimized Go consensus system to 3x throughput by increasing maximum transaction count sent in each message.
- Streamlined deployment of project by using Docker images to generate repeatable builds across diverse environments.
- Unified similar codebases by migrating duplicate components to a single C++ project.
- Assisted distributed systems research by conducting experiments on AWS EC2 and analyzing performance data in gnuplot.

Creesync Software

Software Engineering Intern

- Simplified distribution of professionally clicked photos by building Electron and React Native apps.
- Designed and deployed API to upload and preview photos in low-bandwidth situations using NodeJS and AWS S3.

The Girl Code

Volunteer Full Stack Developer

Developed online platform to interactively teach programming in 10+ workshops across 3 countries using NodeJS.

PROJECTS

CHIP8-rust C Rust

Emulator for CHIP-8 microprocessor. Simulated behavior of machine instructions with Rust, created graphics in framebuffer.

Clay ☑ C, x86 Assembly

A minimal x86 operating system. Handled tasks like interrupts, timers, paging, while balancing performance and maintainability.

cmdmap Z NodeJS

Node module to map CLI programs to a JSON API. Designed abstraction over standard library features for improved security.

May 2019 - Aug 2019

New Delhi, India

May 2020 - Aug 2020

Waterloo, ON
